Arduino and chipKit Universal TFT display library

Requirements

The library require the following connections for 8 bit and 16 bit¹ display modules (the serial display modules does not have any required pins):

Common TFT module pinout

¹ 16 bit Latched has its own requirements. See the next page.

² Pin-out is slightly different when using the CTE TFT LCD/SD Shield for Arduino Due. Please see the "hardware/arm/HW_ARM_defines.h" file.

³ To use a 16 bit display module with a chipKit Uno32/uC32 you **MUST** place the JP4 jumper in the PWM/RD4 position (jumper over the two pins closest to the USB connector)

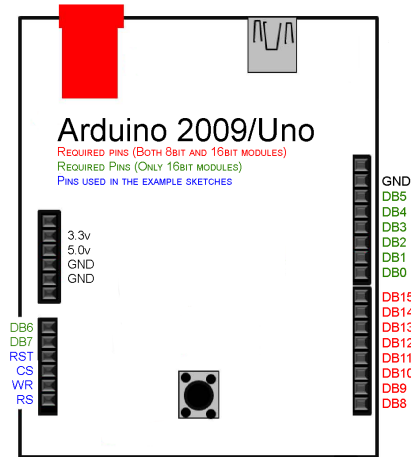

⁴ Pin-out is slightly different when using the AquaLEDSource shield. Please see the "hardware/pic32/HW_PIC32_defines.h" file.

⁵ Connect DB0-DB7 to GND for 8bit display modules

The 16 bit latched display shield has its own requirements:
